Note of obsolescence – DCU040 Module

The DCU040 UWB module has been replaced by our new-generation Truesense modules, introduced and announced to customers and partners early this year, and effective from December 31st, 2025.

To ensure full continuity for ongoing and future projects, the new modules are fully **c**ompatible, requiring no redesign of existing main boards, SOMs, or system architectures.

Support and Service Continuity

Truesense continues to provide full support for all customers using or integrating the DCU040 module, including:

- technical assistance
- firmware maintenance
- bug fixes
- integration and migration support

Our team is available to guide customers through the transition to the new modules and to ensure a smooth, seamless migration path.
